

Londo

132cm DC Ceiling Fan

Description

- 6 speeds: Londo ceiling fan with three blades, incl. remote control
- The Londo ceiling fan is equipped with a quiet DC motor and can be operated at different speeds. A winter function is also integrated. It is controlled using the included remote control. Both the housing and the blades are made of plastic and are colour-coordinated. Can be used in protected, covered outdoor areas.
- **Functions**
- While Londo helps to cool down in summer, it helps to distribute warm air in the room in winter, which can reduce heating costs. You can switch between summer and winter mode (reverse) using the remote control. This also allows you to select one of six different speeds. A memory function ensures that the last setting selected is automatically reactivated when the fan is switched on again.
